

Efficient and Effective Policing

Force Wide Intelligence with Chorus

With crime levels increasing and officer numbers decreasing, solutions are required that enable law enforcement to be efficient and effective.

Chorus' product suite gives investigation teams the tools to fight back against all forms of modern crime by using data analysis to review case information at a high level, answer key investigation questions and develop lines of enquiry, *fast*. To be used by PCs, SPoCs, right through to SIOs, Chorus Analyser, Chorus Investigator and Chorus Indexer supports law enforcement from data acquisition right through to creating courtroom ready reports.

Chorus Indexer

Chorus Investigator

Chorus Analyser

Chorus Analyser

Used by around 90% of forces in the UK and used on a number of high profile cases, Chorus Analyser is designed to do 3 things:

- Cleanse data
- Connection detection
- Create courtroom ready reports

With the ability to ingest, cleanse, and analyse all forms of digital data whilst leaving a full audit trail, Chorus Analyser is the tool favoured by UK police Analysts. With time saving estimated to be 97% on data cleansing alone, ROI can be achieved in under 40 days.

Chorus Investigator

With Analysts in high demand and Investigators short on time, Chorus Investigator is a dashboard to instantly see the who, what, where, and when of a case at the push of a button. Data can be automatically loaded into the software so Investigators can jump straight to the interrogation stage for immediate answers. Data is cleansed so Investigators can filter results and produce reports and maps that can be given in evidence.

Chorus Indexer

Chorus Indexer is designed for investigation teams to share and scan data to find out if a phone number, IMEI, name, keyword, or entity has appeared before in a previous investigation by conducting cross case analysis. Indexer will scan the chosen file directory and find the needle in the haystack of data from any file type including PDFs, XLS, MP3s and PPTs. Data can be shared across departments, forces or even regions.

“While policing’s greatest asset is its people, its biggest opportunity is technology. I see transforming our police forces, so that they are thoroughly equipped for the digital age, as critical to our shared mission – cutting crime and protecting the public”
Policing and Fire Minister, Nick Hurd

Multiple Data Types

The Chorus Suite has the ability to cleanse and analyse all digital data used by law enforcement in criminal investigations. Data with times, dates and locations can be automatically ingested, formatted, and analysed such as call data records, ANPR, handsets, chat and instant messaging, Wifi data and more.

Chorus Architecture

Investigators can open new lines of enquiry for an Analyst to explore and both can share their data and analysis and upload into the cloud. With the full Chorus Suite deployed, investigation teams will have the latest digital technology to tackle all forms of modern crime.
