# The Chorus Suite
Solving Data Challenges

A fully integrated suite to conduct every aspect of a digital investigation as efficiently as possible.

Made up of modular applications, the Chorus Suite equips anyone involved in digital investigations with the tools to solve the most common data challenges; acquiring data, interrogating it, and securely storing and sharing it.

Intelligence and evidence

Drive complex, data rich investigations and present intelligence and evidence in a coherent, chronological, evidentially robust format that is easy to understand. A 21st century service for victims of crime that allows anyone to confidently turn data into intelligence and evidence.

Support of multiple disciplines

Reduce the reliance on finite experts and support multiple parts of an organisation involved in digital investigations:

- Public contact call handlers

- Frontline officers

- Investigators

- Analysts

"It will be impossible for the police and prosecutors to achieve prompt and true justice without highly effective technological methods to acquire and analyse the large quantities of data now available in criminal cases."

Sir Thomas Winsor – Her Majesty's Chief Inspector of Constabulary – 2020 State of Policing

Acquiring data

Acquire data from any internal or external data source or intelligence database. Search all locations and minimise the reputational risk of missing data. Avoid duplication of work and bring together data silos for a complete picture of an investigation.

Interrogating data

Combine and query any digital data in a single place to get a complete view of people, objects, locations, or entities (POLE). Save time with automated cleansing and visualise data using maps, charts and timelines to answer key investigation questions. Produce evidential reports at the click of a button using an intuitive interface.
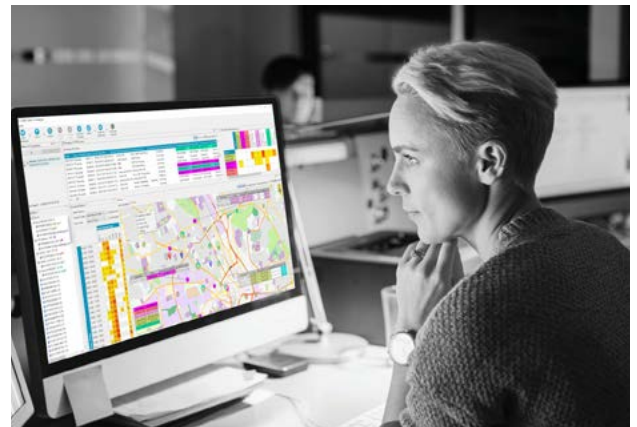

Sharing data

Store all digital evidence in a secure hub and easily share with partner organisations and the CPS. Audit access and provide frontline officers and victims and witnesses of crime with a discreet and secure portal to upload evidence. Allow response officers to view intelligence on locations, incidents and individuals on mobile devices when on patrol to enhance their safety and that of the public.

Supporting the 2030 National Policing Digital Strategy

Chorus already has a reputation for delivering technology that makes a tangible difference to policing and protecting the public from harm. Our suite goes one step further and will enable law enforcement to meet the ambitions set out in the 2030 National Policing Digital Strategy.

✓ Seamless citizen experience

✓ Addressing harm

✓ Enabling officers and staff through digital

✓ Embedding a whole public system approach

✓ Empower the private sector

A trusted award-winning partner

Chorus is used by the majority of police forces in the UK and several major agencies including the Home Office and HMRC. The platform only requires a single business case and approval with a trusted vendor before benefits for the whole organisation and the public can be realised.
