

Chorus Analyse

Expert Cell Site Analysis

Locate, cleanse, combine, and connect call data records and other digital data to answer key investigation questions and generate courtroom ready reports.

Chorus Analyse can automatically ingest all forms of digital data including communications data, ANPR data, handset data and RF surveys.

Combine each data type and overlay in one customisable dashboard to spot links and find out what happened around an offence.

Time saving with automated cleansing

Custom rules cleanse and format data to an evidential standard. Business cases from multiple UK forces have shown a 97% time saving in the data formatting stage, allowing more time to be spent on analysis.

Data visualisation

Use interactive timelines, maps, heat charts and matrices to display data in a number of ways to spot connections and find answers, minimising the risk of missing a connection and increasing detection and sanction rates.

Integrations and deployment

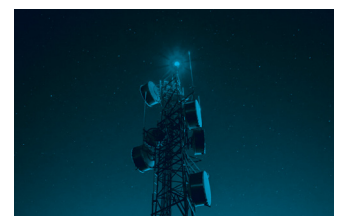

Chorus Analyse integrates seamlessly with IBM i2 Analyst's Notebook and ESRI for further interrogation and data visualisation. Also connect sources such as Orbis consented data using Chorus Ivy. The solution provides out of the box capability and can be platformed on premise and in a secure cloud.

Evidential reporting

As all data is cleansed at source, all reports, exports and maps can be used evidentially. 50 pre-defined reports can be used at the click of a button to answer key investigation questions.

Fully auditable

A robust audit trail provides insight into how Chorus Analyse has processed each row of data. A keyword search function also aids achieving full digital disclosure.
