# Chorus Detect

Search Any Data, Anywhere

Index and bulk search vast amounts of data, from multiple file types, for instant cross-case analysis.

Chorus Detect unlocks unstructured data and intelligence from historical, disparate and operational files to reveal key links and unknown patterns. Spot connections and compare cases in minutes to decide which lines of enquiry to pursue and where to focus resources.

Upload and triage data for tactical analysis

Drag and drop any file type into Chorus Detect and perform fast triage of data to aid investigations.

Flexible searching for instant intelligence

Bulk search multiple entities eg: phone numbers to reveal patterns and case crossovers instantly or perform an elastic search for fast and detailed results.

Search any data type

Index and search across any file type including JPEGs, CSVs and PPTs. Built-in optical character recognition (OCR) can read unstructured data, such as PDFs and text files, to help spot connections and compare cases.

Create watchlists, get notified

Set up watchlists on search terms of interest and receive real-time alerts when a colleague or partner organisation uploads data relating to it.

Visualise data and report on key links

Visualise data in association charts and generate exportable custom and predefined reports to illustrate links and commonalities between individuals, cases and entities.
