

Chorus Mobile Intelligence

Intelligence on the go

A mobile application for frontline officers to improve situational awareness, optimise safety and make informed decisions.

Chorus Mobile Intelligence (MI) links directly to force systems to provide officers with intelligence on locations, incidents and individuals immediately when responding or on patrol.

Chorus MI will display all recorded incidents and individuals within a certain location on an intuitive ESRI map.

Increased officer and public safety

By giving frontline officers contextual information about their surroundings, they are empowered to make informed decisions on how to approach certain situations to ensure their own safety and that of the public.

Link to any intelligence database

Link to any data source containing information on recorded crime to instantly verify individuals. Save time manually requesting information and maximise the time officers are on the streets.

Deployment

Chorus MI can be deployed on any iOS and Android mobile or tablet device as well as Windows and Mac OS tools. Download from an encrypted server and roll out to frontline officers in a matter of minutes.

Customised display

Data can be filtered and narrowed to display required information only. Filter by:

- Geospatial - information within a certain search radius
- Data type - data on certain crime types such as burglaries
- Time - select start and end dates

Information is displayed on ESRI maps in either street or satellite view and recognised gestures control the interface.
