Chorus Capture

Capture Anything, Anywhere

Chorus Capture is a RIPA and MOPI compliant internet intelligence and investigation tool.

Capture digital evidence, in a single click, anywhere online, and store it in a secure digital hub. Conduct targeted simultaneous searches across multiple sources and feed open source intelligence to a central point where it can be developed and exploited.

Capture digital evidence instantly

Search across all web pages and social media platforms to capture relevant pages and information in a single click. Keep a log of all URLs visited to maintain the integrity of the research and capture evidential paths.

Conduct surveillance, create watchlists and get notified

Conduct perpetual surveillance by subject of interest or URL. Create watchlists based on these and receive real-time alerts when new information is added.

Choose to remain anonymous

Use a non-attributable network from any desktop, laptop, tablet or phone. Launch any browser and choose when to reveal and hide identities.

Create courtroom ready reports with robust redaction

Set up templates and automatically generate intelligence reports and exhibits to an evidential standard. Use robust redaction to protect the integrity of alias accounts and prevent collateral intrusion.

### Stored in a secure digital hub

All captured data is virus checked and securely stored in a read-only format in Chorus Hub. The data captured can be used as evidence, even if deleted at source.
