

Chorus Intelligence Suite

Confidently turn data into intelligence and evidence

Data is the new DNA.

Data is the most powerful asset of the digital world. In policing, it is the new DNA.

Data

Challenges and Opportunities

Every crime leaves a trail of digital breadcrumbs that can help us identify who was involved, where they have been and who they have been communicating with. But as well as aiding digital investigations, it can also hinder them.

Data volumes have exploded in recent times and the data that law enforcement must leverage to solve investigations presents challenges. It is in lots of places and it is difficult to access, interrogate, and share.

Crime and data is changing

Criminals increasingly create new and innovative ways to communicate via technology to avoid detection. This has made data more difficult to understand and interrogate, especially complex cases and internet facilitated offenses.

What's more, data is often siloed and requires multiple logins to access, which is time consuming and reduces confidence that all data has been considered.

The future is digital

A new generation of police officer is on the horizon, one which will have higher expectations of employers to provide them with the technology needed to do their jobs.

While there have been significant investments in back-office systems in many police departments, technology for investigating digitally enabled crime is still inadequate. This is, in part, the reason for plummeting detection and prosecution rates.

Intelligence Suite

Digital intelligence and investigations

Collect, develop, and disseminate data, all from a single location.

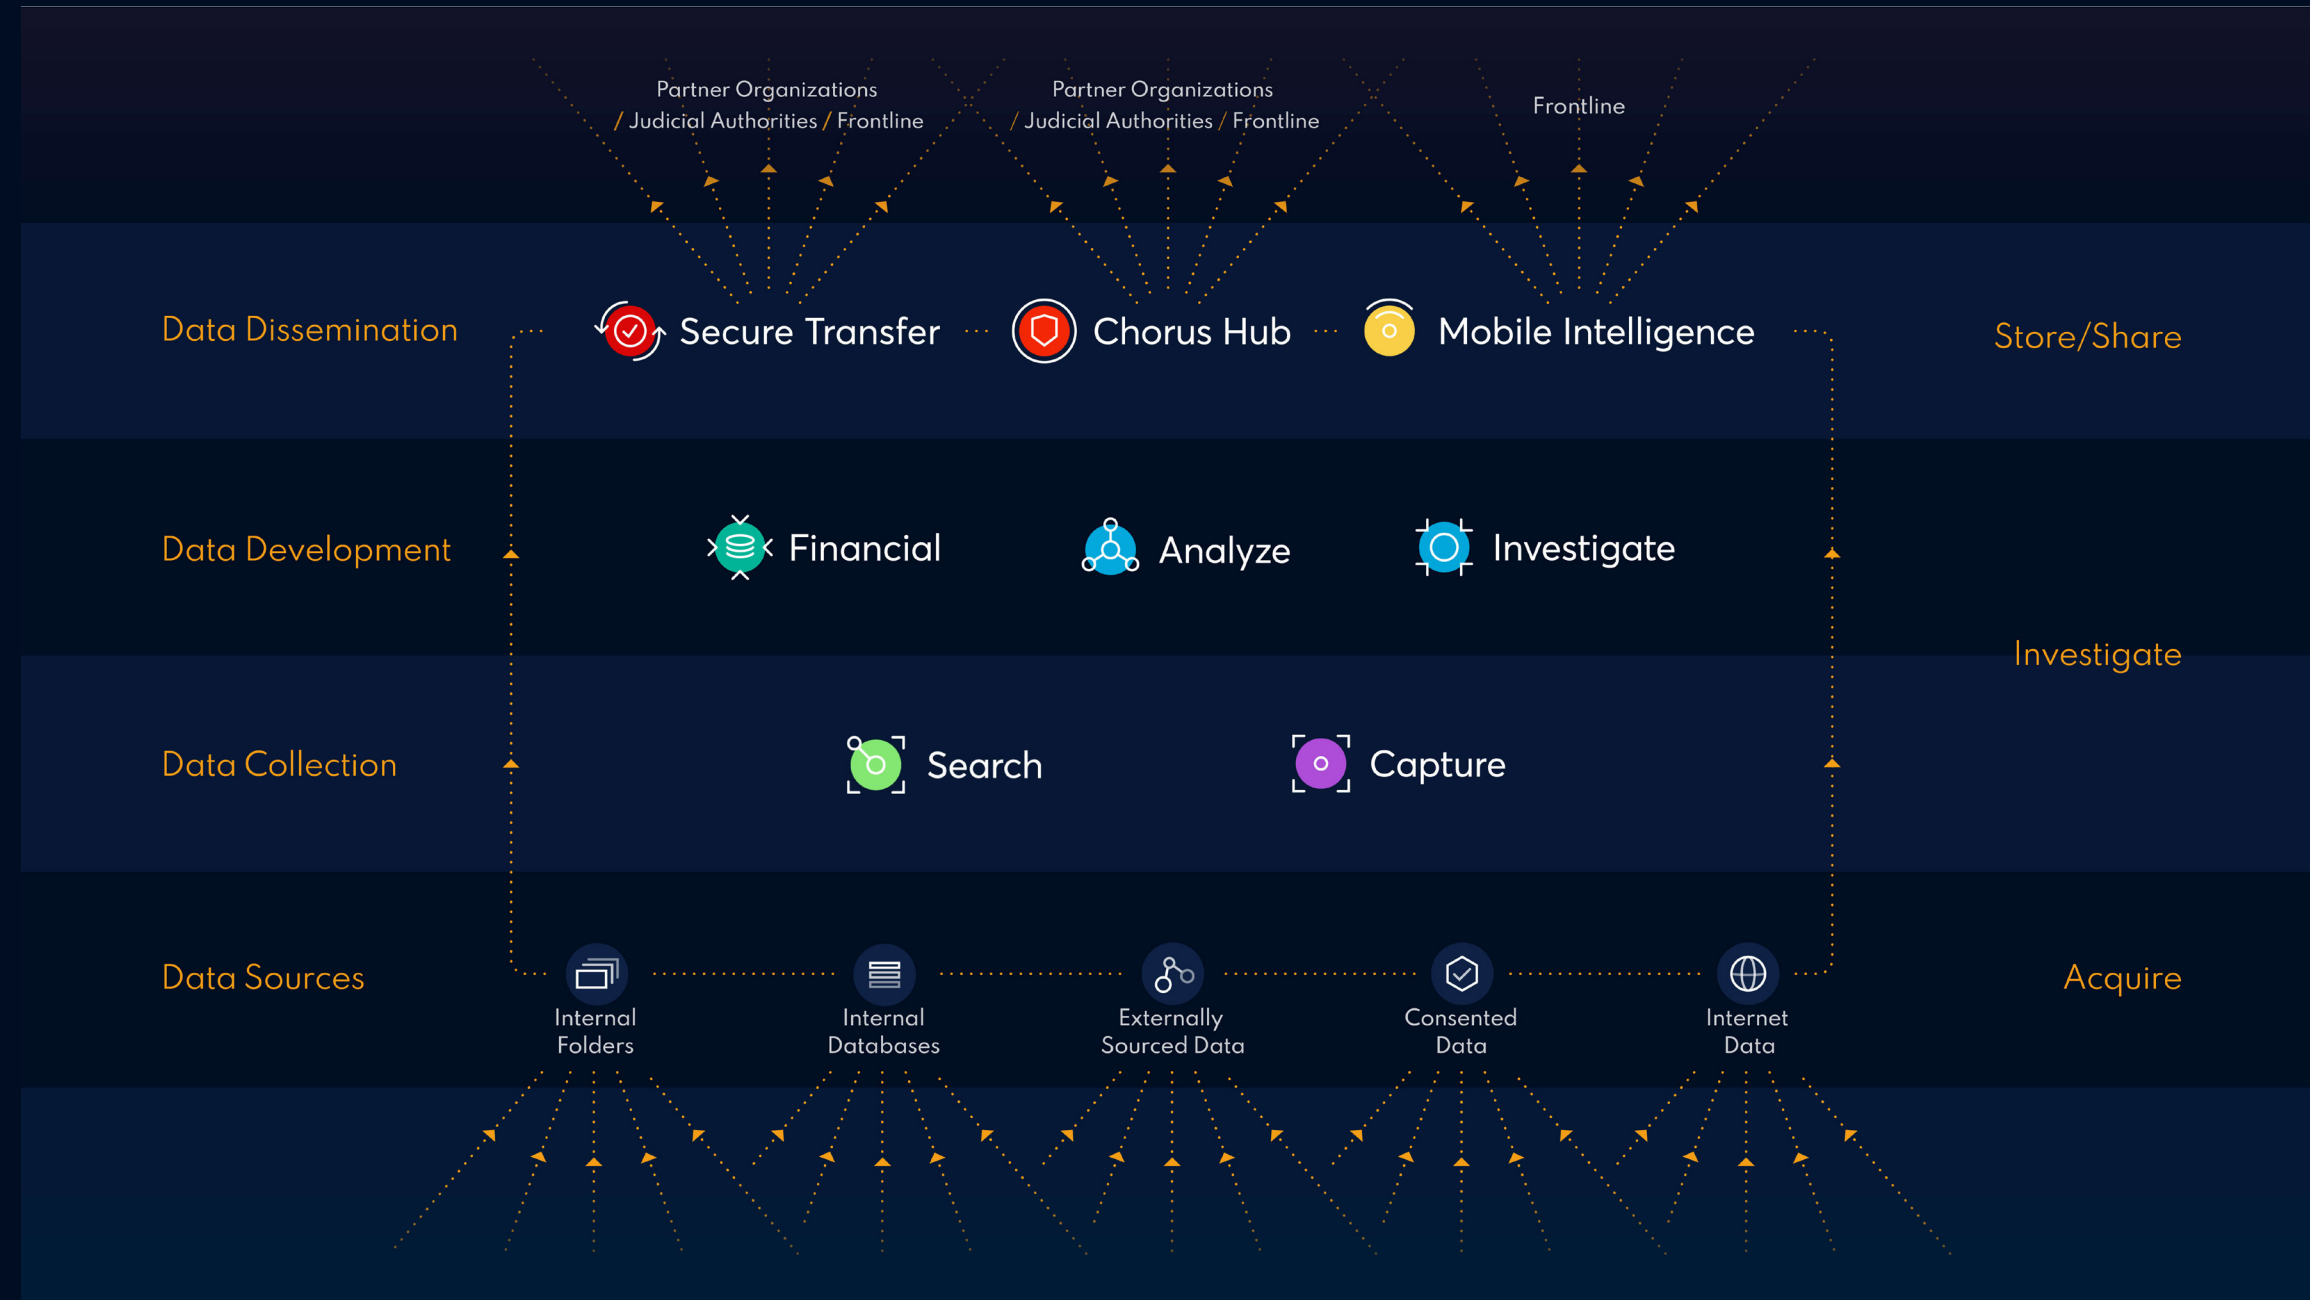

This is why we created the Chorus Intelligence Suite. It allows law enforcement to conduct every aspect of a digital investigation as efficiently as possible.

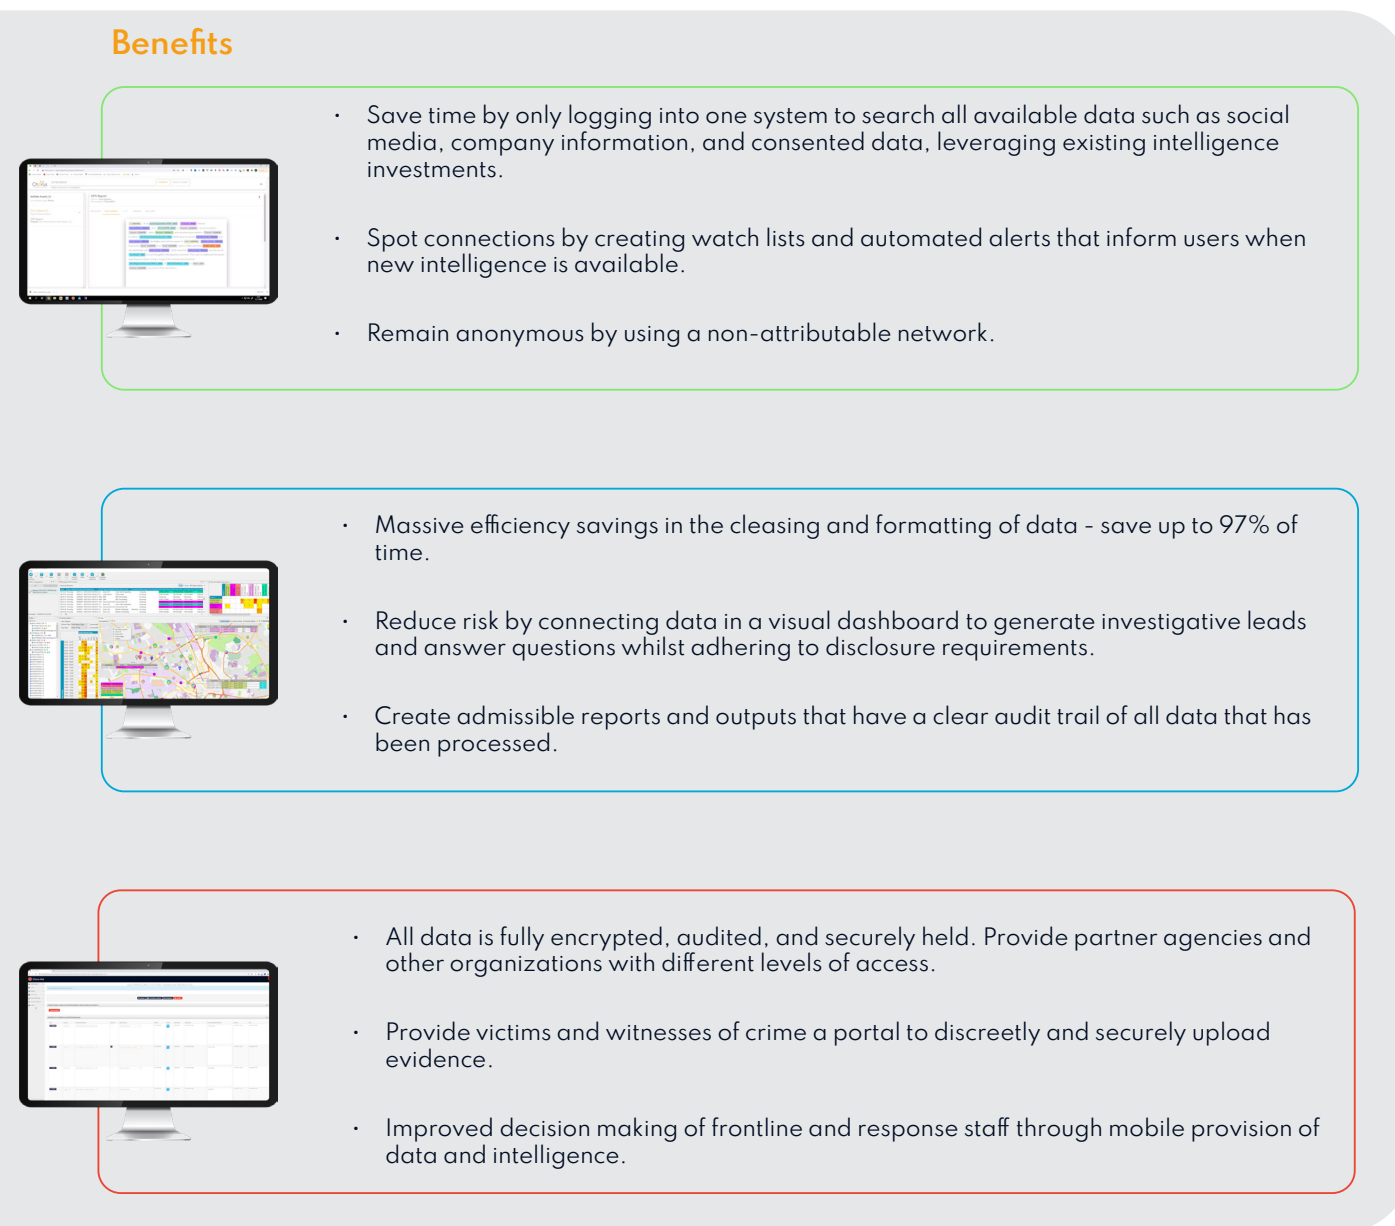

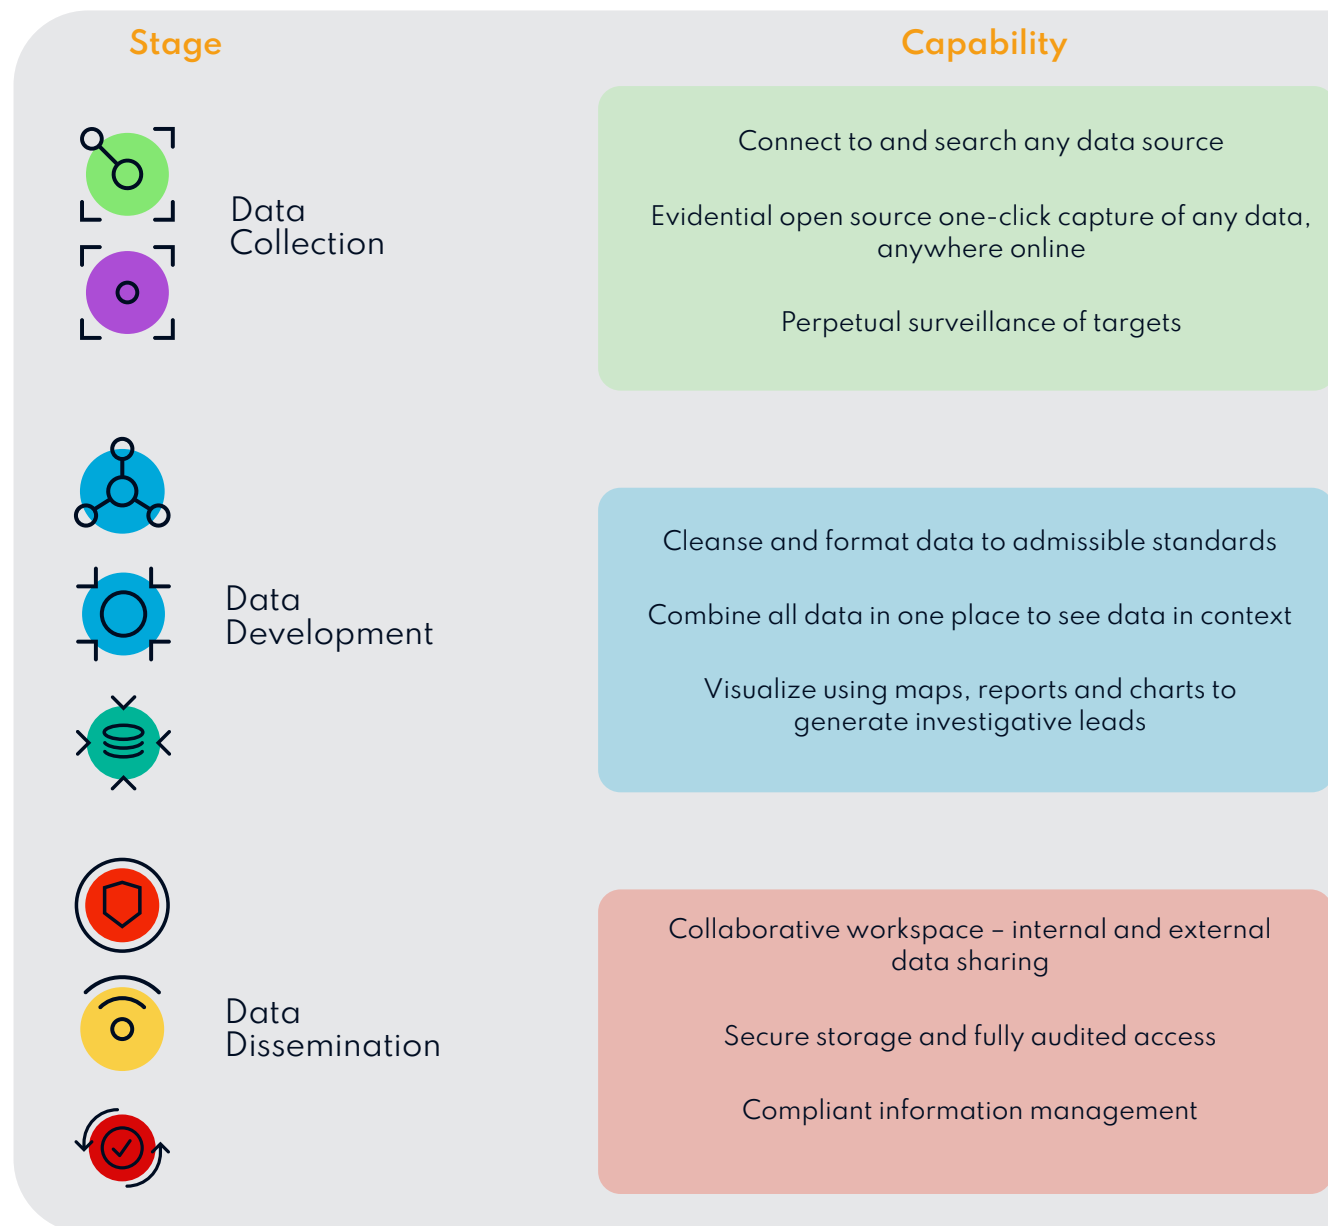

It empowers multiple disciplines to locate and interrogate data and simply and confidently turn it into intelligence and evidence.

Police departments can generate large efficiency savings and make faster, more informed decisions to solve crime and provide a 21st century service for victims of crime.

“Chorus is by far the most significant aid to intelligence technology this century.”

Investigator, UK Police force

Why Chorus?

Chorus has been providing law enforcement with innovative software solutions since 2011. We are already used by most forces and agencies in the UK and many North American agencies.

Aiding law enforcement to solve crime with our technology and innovation has been recognized numerous times, including most recently with the Queen's Award for Enterprise.

Our entire team are experts in their field. We combine former law enforcement Analysts, Investigators and open source experts with software developers that specialize in police and financial data.

Software as a Service (SaaS) deployments of our technology are done using the latest secure cloud environments. We do not have access to, or see your data, at any time.

Be empowered.
